

## Science

### Microhabitats.

Hi Everyone,

Time for you to be super scientists.

Last week we went on the hunt for micro-habitats in the school grounds. Today I would like you to hunt for micro-habitats in your garden.

My children went on a search in the garden and found quite a few minibeast habitats. See what you can discover.

Try looking under rocks, logs, leaves, stones or flowerpots. We noticed that the base of the tree was also busy with ants and a couple of spiders.
