

As you search and explore think about what each habitat provides for its creatures.

What do you think the creatures eat?

How might a creature's choice of habitat protect it from a predator?

If you find worms/woodlice/spiders in a variety of places how are they similar?  
Why do you think this might be?

Now choose one of the mini beasts you are interested in and investigate it further:

You might like to:

- Have a look at it through a magnifying lens or zoom in on a camera,
- Think about how its body helps it survive.
- Sketch it.
- Find out some more facts about the mini beast.

Have fun

Remember to respect the creatures and their habitats and wash your hands after you are finished.
