## Area of a Triangle 1

1. Counting the squares to help you, tick the triangle below which has a different area from the others.

HW/Ex
2. Count the squares to find the area of triangle A. Draw two different triangles with the same area.

風
3. Teesha says,

If I were to make a right-angled triangle with half the area of this square, the area would have seven squares, which would equal $7 \mathrm{~cm}^{2}$.

|  |  | $\mathbf{4 c m}$ |  |  |  |  |  |  |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |
|  |  |  |  |  |  |  |  |  |
|  |  |  |  |  | $\mathbf{4 c m}$ |  |  |  |
|  |  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |  |

Using a drawing of a triangle to support your answer, explain whether Teesha is correct.

## Area of a Triangle 1

4. Counting the squares to help you, tick the triangle below which has a different area from the others.

5. Count the squares to find the area of triangle A. Draw two different triangles with the same area.

## Not to scale

6. Jonah says,

|  |  |  | $6 c m$ |  |  |  |  |  |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |
|  |  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  | 2 cm |  |
|  |  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |  |

Using a drawing of a triangle to support your answer, explain whether Jonah is correct.

## Area of a Triangle 1

7. Counting the squares to help you, tick the triangle below which has a different area from the others.

8. Each square below is equal to $2 \mathrm{~cm}^{2}$. Count the squares to find the area of triangle $A$. Draw two different triangles with the same area.

9. Arnold says,

Arnold is correct. Draw 3 different triangles that can be created to help Arnold prove his statement.

Not to scale

## Developing

1. A
2. $8 \mathrm{~cm}^{2}$. Various answers, for example:

3. Various answers, for example:

Teesha is incorrect. If half the area of the square is used to create a right-angled triangle, then the area of the triangle would be $8 \mathrm{~cm}^{2}$, not $7 \mathrm{~cm}^{2}$ as shown below.

## Expected

4. B
5. $8 \mathrm{~cm}^{2}$. Various answers, for example:

6. Various answers, for example:

Jonah is correct. If half the area of the rectangle is used to create a right-angled triangle, then the area of that triangle would be $6 \mathrm{~cm}^{2}$, as shown below.
