1) B is the odd one out because it represents 50 hundredths (five tenths). A, C and D all represent five hundredths.

2) The numerator is the same as the decimal because the numerator and decimal both represent 89 parts. The decimal is different because it has a zero to represent there is not a whole and has a decimal point to separate the whole ones from the parts. The fraction is different because it has a denominator that clearly shows that the whole is equivalent to a 100 parts.

3) False because 60 hundredths is equivalent to 0.6. 60 hundredths means 60 parts out of a 100 and 0.6 represents six tenths which is the same as 60 hundredths.

1) a) E (0.04), C (0.13), D (0.31), A (0.34), F (0.4), B (0.43), G (0.97)

   b) Decimal numbers have to be between 0.4 and 0.13. Accept any of the following answers:

   0.05, 0.06, 0.07, 0.08, 0.09, 0.1, 0.11, 0.12

2) There should not be any number on the number line bigger than 0.66 or smaller than 0.1.
